## UNITED STATES DEPARTMENT OF AGRICULTURE BUREAU OF AGRICULTURAL ECONOMICS WASHINGTON, D. C.

March, 1945

FARM PRODUCTION, DISPOSITION, AND INCOME OF TURKEYS, 1943-44  $\frac{1}{2}$ 

Turkey production reached a new high level of 35,919,000 birds in 1944 -11 percent more than in 1943 and 13 percent above the 5-year (1938-42) average.
Production was up in 35 States, down in 11 of the less important turkey-producing States, and showed no change in 2 States.

California led all States in the production of turkeys with 4,223,000 birds. It was followed by Texas with 3,667,000 birds and Minnesota with 3,319,000. These 3 States produced almost a third of the turkeys produced in the United States. The Western States produced 31 percent of the Nation's turkeys in 1944, the West North Central 30 percent, the South Central 15 percent, the East North Central 10 percent, the South Atlantic and North Atlantic 7 percent each.

Turkey Sales Larger: Turkeys sold from farms in 1944 totaled 34,801,000 birds -- 14 percent more than in 1943 and the largest number of record. About 7,572,000 birds sold in 1944 were carried over from the 1943 crop. Of these, 2,751,000 were late-market birds sold during January and February, and 4,821,000 were breeder hens and toms, sold after the breeding season, mostly in May and June. Of the 35,919,000 birds produced in 1944, about 2,366,000 late-market birds, 4,675,000 breeder hens, and 450,000 breeder toms were carried into 1945.

Higher Prices: The average price received for turkeys sold alive in 1944 was 33.9 cents per pound as compared with 32.6 cents in 1943. Because of the unprecedented civilian demand for that part of the crop left after the large requirements of the Army had been met, prices reached O.P.A. ceiling levels in all parts of the country.

Cash Income Increases: Cash income from sales of 583,829,000 pounds (live weight) of turkey in 1944 was \$197,983,000 -- an all-time high. Income was 23 percent above that of 1943 and was more than twice the 5-year average. About 37 percent of the cash income from the sale of turkey meat went to producers in the 4 leading States of California, Minnesota, Texas, and Iowa, which ranked in the order named in cash income from sales in 1944.

Market Bird Heavier: Market turkeys have been gradually getting heavier, mainly because of the increase in the broad-breasted type of bird. Hens sold in 1944 averaged 13.1 pounds live weight, compared with 12.7 in 1941. Toms averaged 20.3 pounds compared with 19.1 in 1941. All birds sold averaged 16.7 pounds in 1944 and 15.9 in 1941. The heaviest market birds are produced in the Pacific Coast States, where the broad-breasted bronze type of bird predominates and where birds are raised to heavy weights for the freezer market, which supplies the hotel and restaurant trade.

Birds Marketed Earlier: Turkeys were marketed earlier in 1944 than in any of the 3 preceding years. The government inaugurated a program early in the year to pay above-base prices for hens, and for young turkeys purchased in August, September, and October for shipment to soldiers overseas. This program and the favorable weather were conducive to an early hatching season and an early turkey crop. A larger proportion of breeders were marketed in May and June than in 1943.

In October, 12 percent of the annual sales were made, as compared with 8 percent in 1943. By December 1, 69 percent of the crop had reached the market, compared with 64 percent in 1943 and 1942. During the last 4 years there has been a tendency toward earlier hatching and earlier marketing of turkeys. In 1944, marketing was especially early in the West North Central States. In this area 80 percent of the birds had moved to market by December 1 compared with 69 percent in 1943.
